Forecast for Tuesday 04 Jun 2024

Weather: A dry but rather cloudy start, patchy outbreaks of rain arriving from the west through the morning with hill fog likely for southern and western facing slopes. Clearing through the evening.

Chance of cloud-free hill tops above 600m: 30% with many tops shrouded in cloud for much of the day. Cloud bases 400-500ft. Clearing in the evening with an 80% chance of being cloud free.

Low cloud and visibility: Cloud bases at 400-500ft for much of the day, especially over southern and western facing slopes. This resulting in poor or very poor visibility. Cloud then clearing in the evening and lifting to above the summits with visibility returning to good or excellent.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Brisk winds and rain through the afternoon will bring slippery conditions under foot and a significant cooling effect. You are advised to dress appropriately for the conditions and take care with your footing. Low cloud will also result in very poor visibility at times, often at the same time as the wet and windy conditions.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sun 02 Jun 2024	0mm	0mm	0mm

Forecast for Wednesday 05 Jun 2024

Weather: A dry and bright start with plenty of sunny spells. An isolated light shower is possible in the afternoon. A fresh northwest wind.

Maximum wind: West or northwest 15 – 20 mph, occasional gusts to 30 mph.

Chance of cloud-free hill tops above 600m: 90% isolated showers possibly brining cloud bases down to the summits for a time.

Low cloud and visibility: Cloud generally above the summits, possibly dropping to 500ft briefly in showers. Visibility generally good or excellent, reducing to moderate in any showers and briefly poor in hill fog.

Temperature: **Valleys:** 8 C increasing 15 C
At 600m: 4 C increasing 7 C
Freezing level: Above summits.
